Cyber Talent Ethiopia 2025 Registration Form

This form helps us understand your background, skills, and aspirations. Please answer the following questions thoughtfully, providing specific examples where possible. Each response should be 150–300 words unless otherwise stated. Submit your responses in a single document to [This Link](#)

Warning AI-generated content is strictly prohibited and will result in disqualification

Past Projects

Describe 1–2 significant projects you have worked on, related to cybersecurity, software development, embedded systems, aerospace, or other technical fields. Highlight your role, technologies used, challenges faced, and outcomes achieved. (Example: A cybersecurity project securing a web application or an embedded system for IoT.)

I've had the opportunity to work on a variety of projects. One of the highlights was creating an Equb Management System all on my own, which helps manage traditional savings groups. I also teamed up with a friend to develop a Flappy Bird game, which was a fun challenge. On top of that, I've built to-do list apps and a calculator app to really hone my coding skills. Plus, I interned at INSA, where I gained some invaluable experience in a professional tech setting.

Hackathons and Competitions

List any hackathons, coding competitions, or technical challenges you have participated in. Include the event name, date, your contributions, and any achievements (e.g., awards, rankings). If you haven't participated, describe how you've engaged with technical communities or self-driven challenges.

I haven't taken part in any hackathons yet, but I've teamed up with my friends on a few cool projects, like a Flappy Bird game.

Current Courses or Training

Detail any courses, certifications, or training programs you are currently enrolled in or recently completed. Specify the subject area (e.g., penetration testing, cloud computing) and platform (e.g., Coursera, TryHackMe...). Explain how these align with your career goals.

I'm currently part of the ALX Pathway program, where I'm diving into software development and honing my coding skills. On top of that, I'm teaching myself the MERN stack to create full-stack projects. This journey is all about reaching my goal of becoming a proficient web developer and eventually leading projects that blend technology with the creative and cultural industries.

University Exit Project (Optional)

If applicable, describe your university exit project or thesis related to cybersecurity, software development, embedded systems, aerospace, or a relevant technical field. Include the project title, objectives, technologies used, and key outcomes. If you did not complete a university exit project, you may skip this question.

My final year project was a health insurance management system, HTML, CSS, and JS for Frontend, PHP for backend, and MySQL database
